Delivery Management System

Problem

Data Analysis

Turning shipping data into insights projection posses a challenge, identifying top-selling products each region to optimize goods distribution and production.

Delivery Visibilities

Management encounters difficulties in monitoring of ongoing shipments. It's not possible to track drivers' current deliveries in real-time without system.

Performance Delivery

Analyzing delivery performance of each driver and region has become a pain point for distribution companies, time consuming and requiring staff to evaluate.

Feature

Delivery Management

Manages delivery targets, mapping manifests with task forces, and handling pickup and return of goods.

Realtime Dashboard

Informative dashboard for real-time monitoring of delivery progress and reviewing past delivery history.

Warehouse Management

Mapping warehouses and areas, tracking inventory in and out, stock movement, and stock taking.

Driver Management

Defining drivers and mapping task forces with their respective areas to establish data restrictions.

Log Tracking

Detailed records of delivery history, including photos, status updates, and coordinates each delivery point.

SalesForce System

SalesForce sell products to nearby stores on the spot, outside of their scheduled delivery routes.

Benefit

Realtime Delivery Control

Management can effortlessly and promptly monitor real-time delivery progress through the delivery dashboard.

Performance

Calculating and determining the delivery performance of taskforce and region becomes easier, faster, and practical.

Data Analysis

Obtaining delivery data for strategic decisions becomes effortless and accessible to chief level of the company.
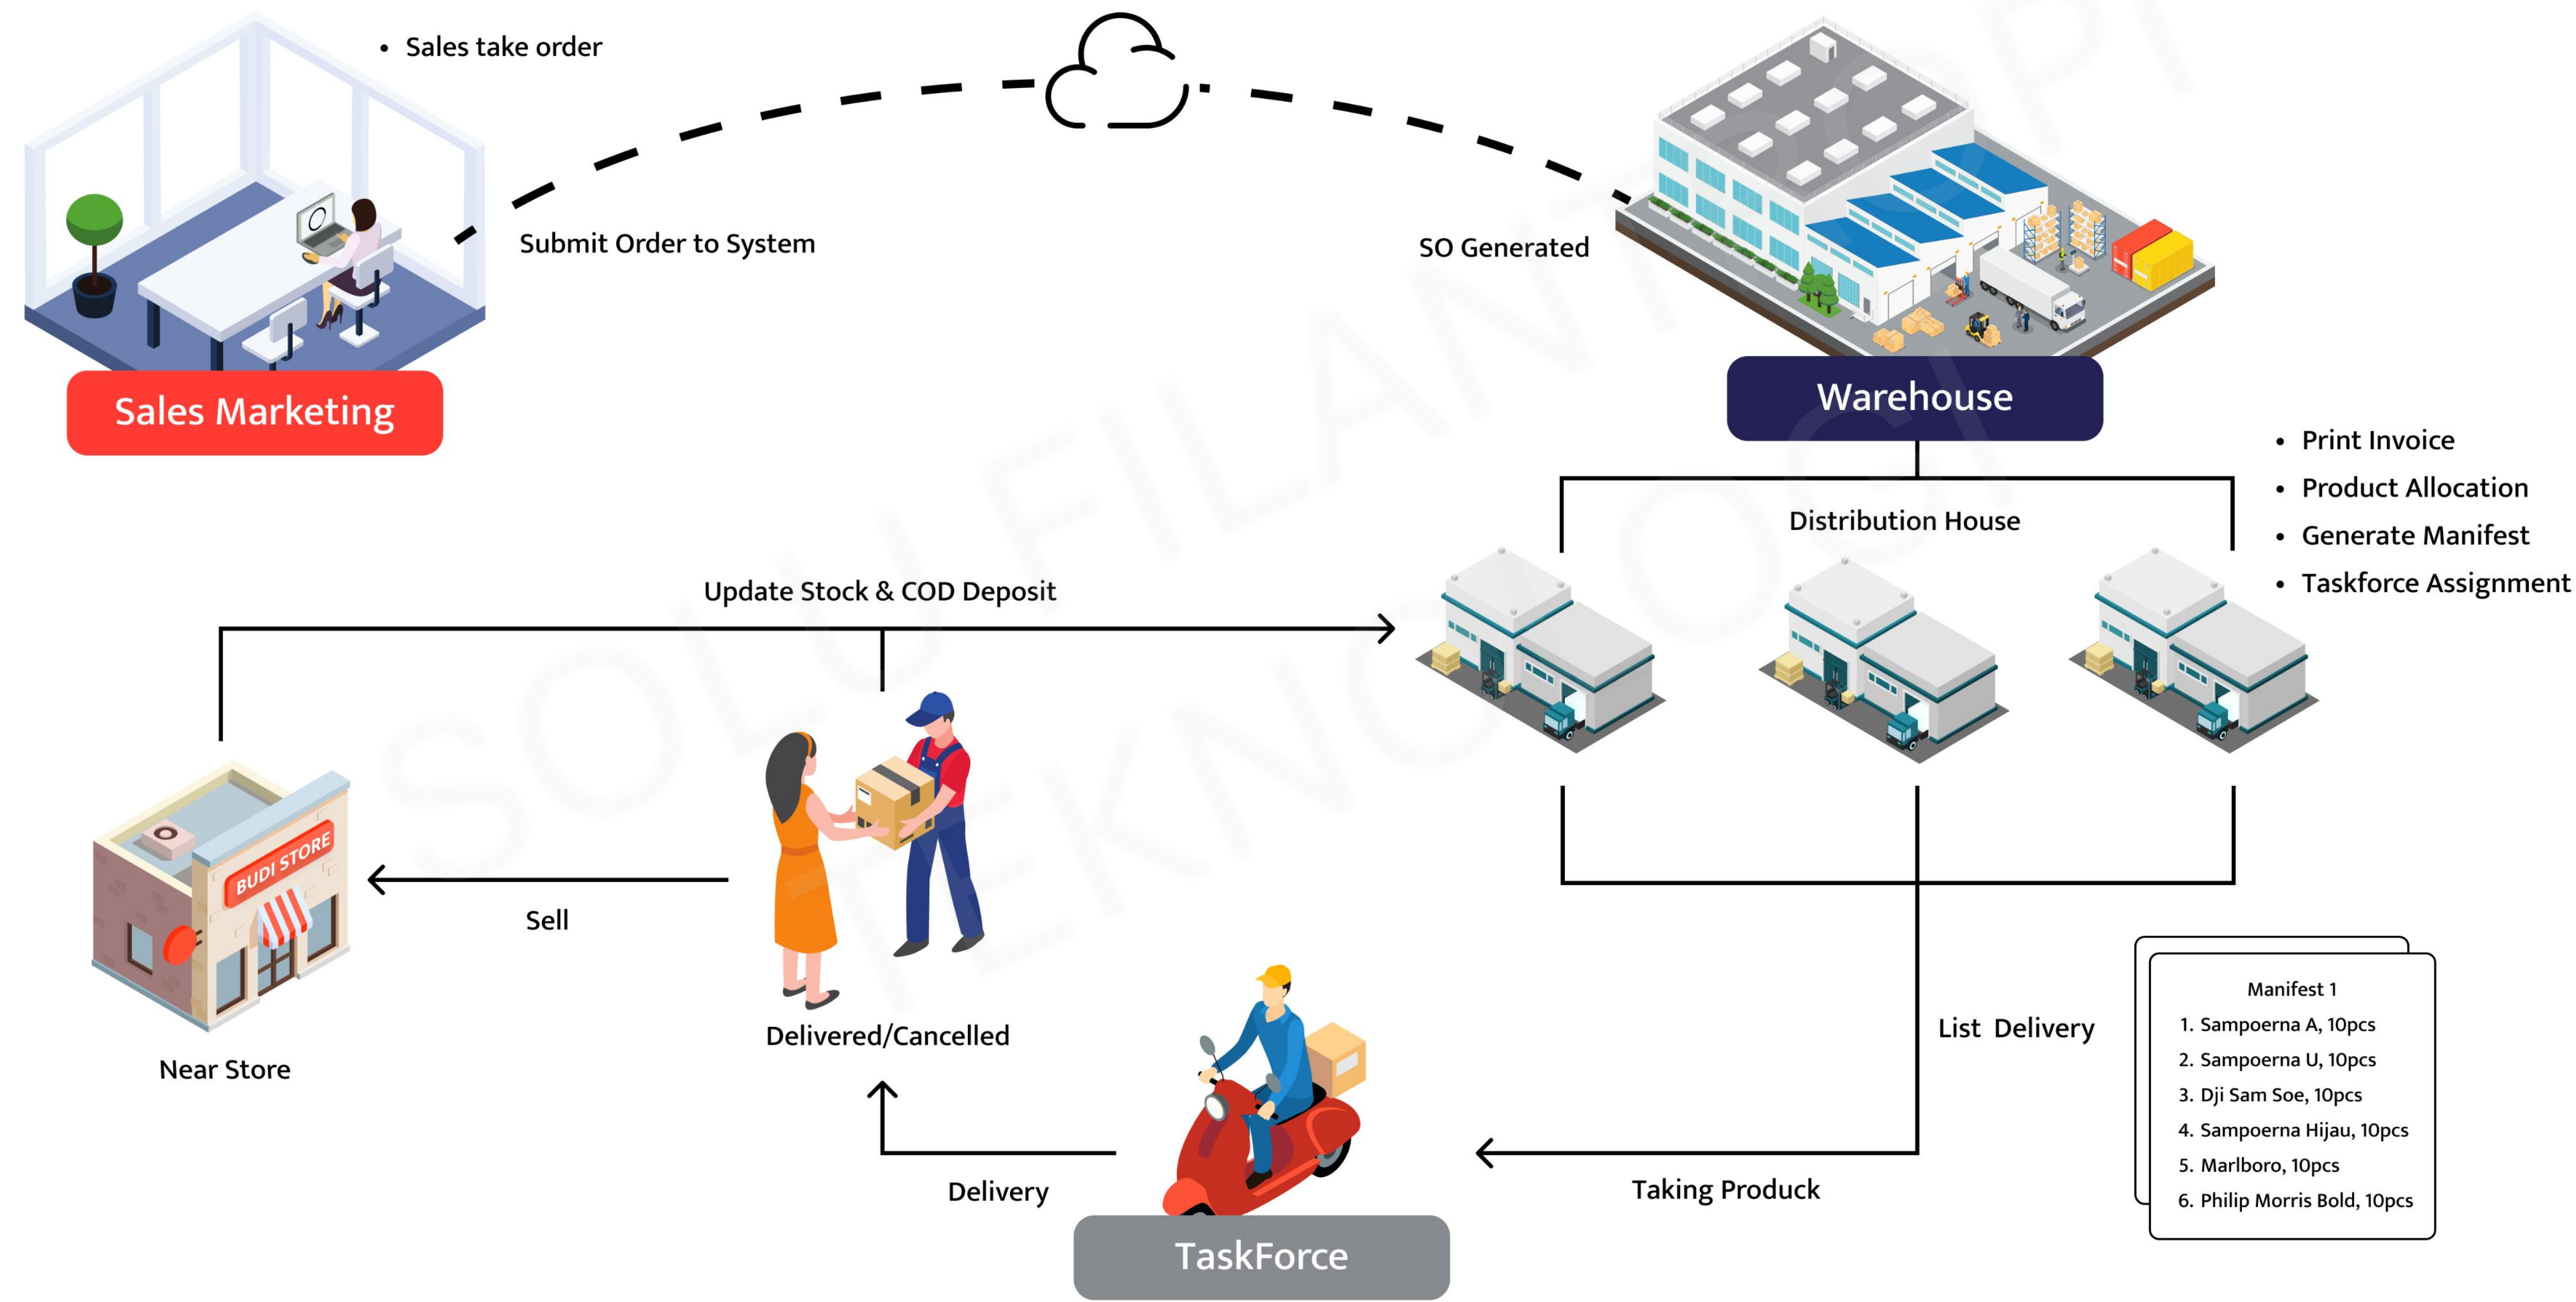

Customizable

Business processes are customizable to meet the specific requirements and can be integrated to existing system.
